

CONTRACT 2

CONservative TRreatment of Appendicitis in Children – a randomised controlled TRIal
IRAS: 302249

Do children with simple acute appendicitis really need an operation to get better?

Research study for children with simple acute appendicitis

If you have come into hospital because your child has **abdominal pain** and is diagnosed with **simple appendicitis**, you may be asked to participate in a research study that we are currently running.

The study is comparing two effective treatments for **simple appendicitis** to see if one is better than the other.

For more information, please ask the nurse or doctor looking after your child.

CONTRACT 2 poster v2 30-Jan-2023
